

License system 3 - installation

Before you can use a program from StruSoft you must configure the security system.

Check the following with your IT-department before you start:

- You must have privileges to install.
- Only for local installations: The computer must be connected to the Internet.
- Only for network installations: You must know the name, the IP-address and the port that your license server is using.

Don't insert the USB-lock now.

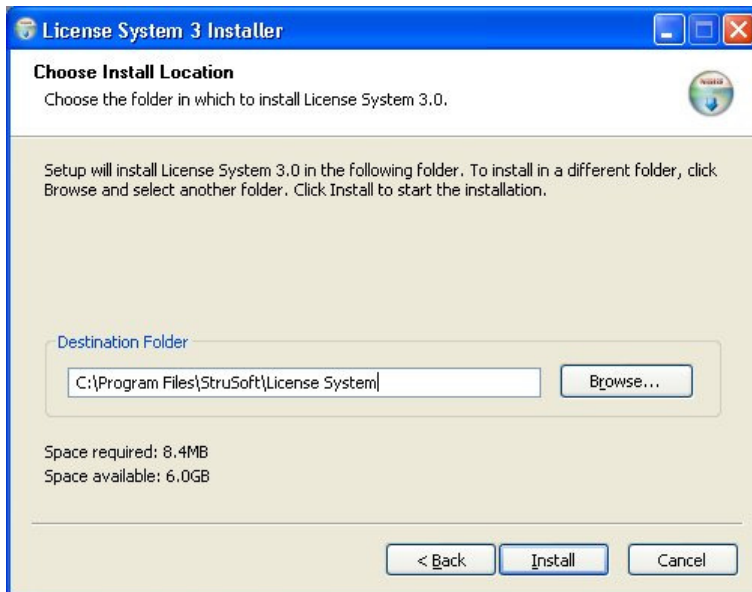

If you install the license system separately you double click on your downloaded file and the installation will start. When you do the installation from a program, go directly to the next pictures.

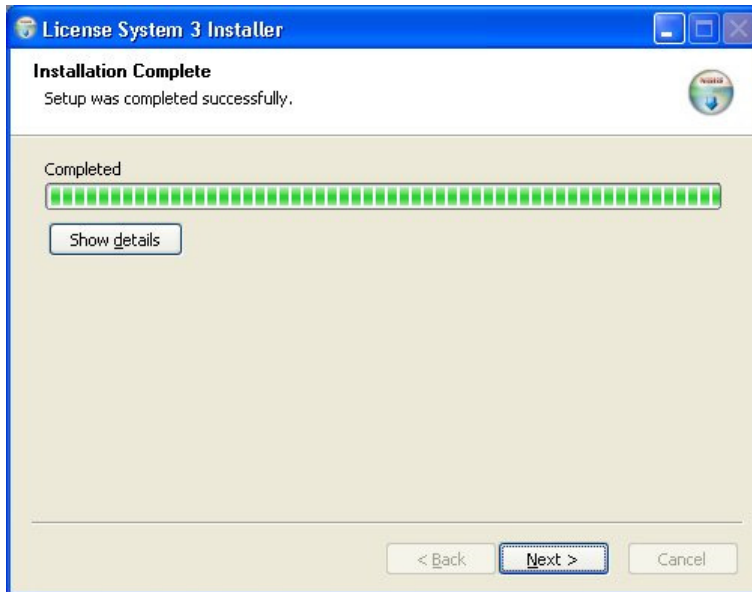

Click on **Next** to start the installation.

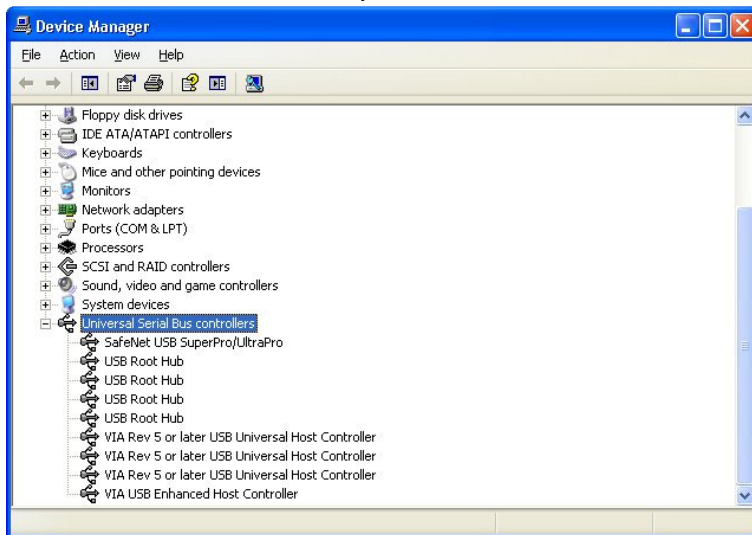

Now it's time to choose where on the hard drive the program will be stored. The common thing is to accept the suggested "Destination Folder" and click **Next**. The "Destination Folder" can be different depending of what operating system and language you are using.

The installation starts. License program and drivers will be installed on your computer. When all is completed you will see this picture. **Don't** click on Next right now.

If this is a local installation it's now time to put the USB-lock in the computer. It will automatically show down by the clock that the computer found a new hardware. You can control this in "Device Manager". Go to "Universal Serial Bus controllers" and you will see "Safenet USB SuperPro/UltraPro".

If you get "hardware lock found but no ID could be read". Restart the computer.

Close "Device Manager" if you have it open and click on **Next** in the License System 3 Installer window.

Control that the checkbox for **Configure and update your license** are checked to update the licenses. This is both for local- and network installation.

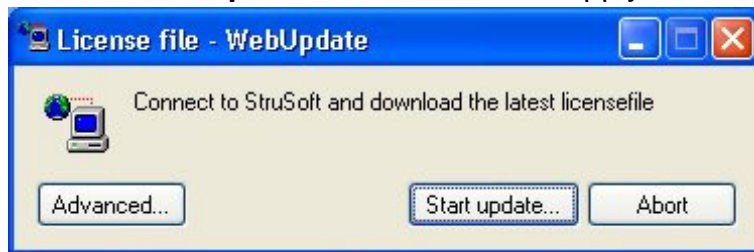

Local installation (for network, see page 6)

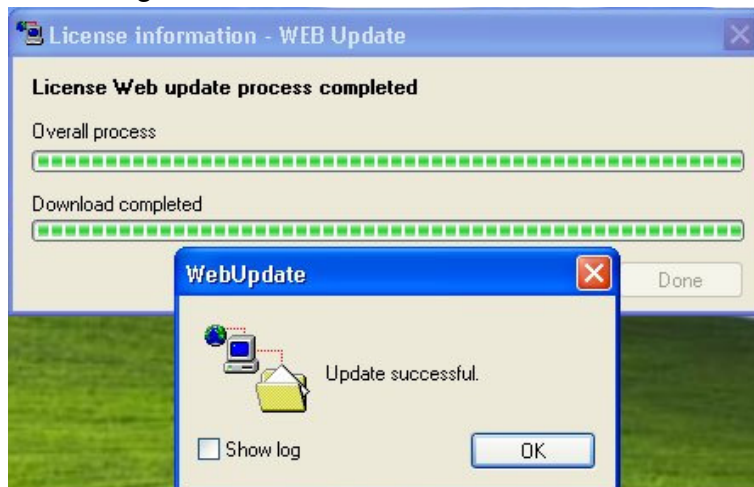

If the hardware lock is on your computer you should use Local. Click on **Local**.

Click on **Start update** to download and apply the license file.

The configuration of the hardware lock / license file completes. Click on **OK**.

Click on **OK**.

Installation and configuration of the local hardware lock are now completed.

Network (Client) installation

Click on **Network**

To configure the client towards the license server, click on **Settings**.

Fill in your "License Server name", "License Server IP" and "License Server port". If you didn't make any changes during the installation of the License Server, port 8080 is the correct. Click **OK** when you are done.

Connection settings

Please enter valid address to License Server.
* License Server name and IP address.
* Server port to connect to.

Settings

License Server name:

License Server IP:

License Server port:

Communication Mode

Use HTTP protocol

Use pipe communication

Click on **Retry** to check the connection.

License Server connection

License Server Manager could not establish a connection to License Server

Current settings

Server name (address): _____

Server port: **8080**

* To change current settings press 'Settings'

* [To check if License Server is online click here.](#)

If you see "A connection could be establish to License Server" in this dialog box then everything is working. If not, something in "Settings" is not correct. Click **OK** when the communication is prepared.

Installation and configuration of the network client are now completed.

Update licenses, local lock

Go to “Start” – “Programs” – “StruSoft” – “License System” – “Update local license”

The update will start directly. When it's completed you will see this. Click **OK**.

Advanced

To change settings, test configuration or change between local/network. Go to “Start” – “Programs” – “StruSoft” – “License System” – “Change StruSoft license settings”.

Click on **Advanced**. In this window you see when you last updated the licenses.

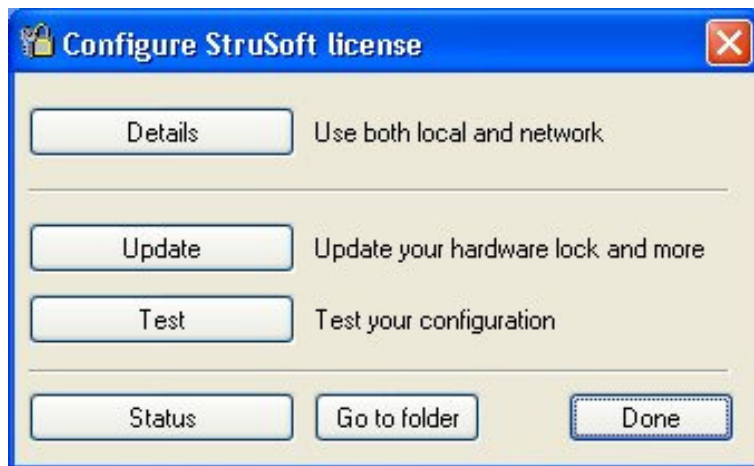

”Details”: to change between local or network installation.

“Update”: opportunity to update from other source.

“Test”: see what license you have.

“Status”: see the status for driver, hardwarelock number and lockfile ID.

“Go to folder”: this is where the license files are stored.

Please contact us on support.license@strusoft.com for support concerning the license installation.
